SKILLS

FRONT-END DEVELOPMENT

Proficient:
HTML • CSS • SCSS • JavaScript • React
• NextJS

BACK-END DEVELOPMENT

Proficient:
Node.js • C#
Exposure:
Ruby • Python

DEVELOPMENT OPERATIONS

Proficient:
Docker • Gulp • AWS • Azure • Google
Cloud Platform • MySQL • MariaDB •
PostgreSQL • MongoDB • Redis
Exposure:
Ansible • Terraform

INTERESTS

Gaming • Traveling • Further Education

EXPERIENCE

BUMP | SENIOR SOFTWARE ENGINEER

Oct 2019 - Present | London, UK

- Migrated old Parse sever back-end to a GraphQL API to deliver product changes faster and increase security whilst also lowering server costs as less instances were required.
- Spoke and dealt with software vendors to find suitable tools such as Humio for cloud logging to ensure we used the right tools while not breaking the bank.
- Introduced event-driven Order system so that we could gather more data about shipping and warehouse handling progress.
- Managed SCRUM processes and introduced tooling so that we could work efficiently.
- Wrote take-home engineering tests, given live engineering tests and interviewed candidates so that we hired engineers with the skills to perform the tasks at hand.

TESSIAN | SOFTWARE ENGINEER

Jul 2017 - Jul 2019 | London, UK

- Wrote and presented presentations to business development and other tech teams how our client facing products work so that they always sell our software with up to date knowledge.
- Provide client support for escalated technical support issues and queries in order to provide customer success.
- Helped create Tessian's Gateway (MTA) that processes emails in order to remove the reliance on the Outlook add-in and support most if not all platforms.
- Migrated the add-in team from MSFT TFS to Git and new release work-flow in order to make it easier for others to review code and created a release process to keep track of changes.
- Automated release pipeline for our C# projects using Concourse in order to streamline our QA pipeline so that we can deliver quality software on-time.

CANDDI (CAMPAIGN AND DIGITAL INTELLIGENCE LIMITED) | SOFTWARE ENGINEER

May 2015 - Jul 2017 | Manchester, UK

- Introduced a new micro-service architecture using AWS Lambda, API Gateway, AWS SNS and AWS S3 to reduce AWS EC2 instance costs.
- Refactored our legacy PHP monolithic main app's authentication system to auth0.
- Introduced logging within all CANDDi products using AWS Lambda and API Gateway. Also migrated Grunt scripts to the Serverless framework for AWS Lambda.
- Reworked entire main product dashboard in stages to make it more user-friendly.

PROJECTS

HARAKA [HTTPS://GITHUB.COM/HARAKA/HARAKA](https://github.com/HARAKA/HARAKA)

Jul 2017 - Present | London, UK

Core-maintainer of a popular open-source SMTP server written in Node.js, used by large companies such as Craigslist
